Total RNA was purified from the sorted cell population using TRIZOL reagent. RNA (0.3 ug) was converted into double stranded cDNA using Clontech's Cappinder CDNA Library Construction Rit (Clontech) according to the manufacturer's protocol and cloned into ECORI digested Lambda Zap II vector (Strategene). The phage library was amplified once prior to in vivo excision in SOLR cells. Individual colonies were grown, and the CDNA inserts were sequenced in high http://www.nisc.nih.gov/)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens
